GENERAL INFORMATION

Introduction

Congratulations on your purchase of a Perlick commercial underbar product. This manual has been prepared to assist you in the installation of your cabinet and to acquaint you with its operation and maintenance.

This manual has been prepared to assist you in the installation of your under counter refrigerator and to acquaint you with its operation and maintenance.

We dedicate considerable time to ensure that our products provide the highest level of customer satisfaction. If service is required, your dealer can provide you with a list of qualified service agents. For your own protection, never return merchandise for credit without our approval.

We thank you for selecting a Perlick product and assure you of our continuing interest in your satisfaction.

Warranty

To register your product, visit our web site at www.perlick.com. Click on "Commercial", then "Service". Click on the link "Warranty Registration Form". You must complete and submit this form or the installation date will revert back to the ship date.

Please record the purchase date and the dealer's name, address and telephone number below.

TABLE OF CONTENTS

SAFETY

PLEASE READ all instructions completely before attempting to install or operate the unit. Take particular note of the DANGER, WARNING and CAUTION information in the manual. The information is important for the safe and efficient installation, operation and care of your Perlick unit.

⚠ DANGER Indicates a hazard that WILL result in serious injury or death if precautions are not followed.

⚠ WARNING Indicates a hazard MAY cause serious injury or death if precautions are not followed.

⚠ CAUTION Indicates a hazard where minor or moderate injury may occur if precautions are not followed.

NOTICE Indicates that property damage may occur if warnings or instructions are not followed.

IMPORTANT!
Read and understand all information in this manual before attempting the installation.
All plumbing and electrical work must be performed by a qualified technician and
conform to all applicable state and local codes.

Perlick is committed to continuous improvement. Therefore, we reserve the right to change specifications without prior notice

Refrigerant

⚠ **DANGER** **Take caution when handling, moving and using the product to avoid damaging the refrigerant tubing or increasing the risk of a leak**

⚠ **WARNING** **All service work shall be performed by factory authorized service personnel and all component parts shall be replaced with like components to minimize the risk of possible ignition due to incorrect parts or improper service.**

⚠ **CAUTION** **If service is necessary, repair work must be performed by a Perlick authorized servicer. Work done by unqualified individuals could potentially be dangerous and will void the warranty.**

All models covered in this user manual are manufactured using refrigerant R600a (Isobutane). R600a is a hydrocarbon. This refrigerant is flammable and is only allowed for use in appliances with fulfill the requirements of UL471, or UL/IEC 60335-1 and UL/IEC 60335-2-89. (To cover potential risk originated from the use of flammable refrigerants). Consequently, R600a is only allowed to be used in refrigerating appliances with are designed for this refrigerant and fulfill the above-mentioned standard.

- R600a is heavier than air. The concentration will always be highest at the floor level.
- The explosion limits are as follows:
  o Lower Limit: 1.8% by volume
  o Upper Limit: 8.4% by volume
  o Ignition Temperature: 460°C

Preparing the Cabinet for Use

UNCRATING AND INSPECTION

Remove all crating material before operating. Carefully inspect cabinet for hidden damage. If damage is discovered, file your claim immediately with the transport company. Perlick is not responsible for damage in transit.

⚠ **DANGER** **Do not use or store flammable liquids (ie; gasoline) or vapors near the appliance to avoid fire.**

INSTALLATION

NOTICE The unit must NOT be totally enclosed or damage may occur. Air circulation must not be restricted. The condenser at cabinet front must be provided with a minimum of two inches air space. Be sure to provide access so front cover can be removed to clean the condenser.

NOTICE **If unit has been laid on its back or sides, place unit upright and allow a minimum of 24 hours before connecting power. Failure to follow this procedure may damage the compressor and void the warranty.**

NOTICE **Use care when handling, moving and using the product to avoid damaging the refrigerant tubing or increasing the risk of a leak.**

ELECTRICAL

For specifications, see data plate located on the cabinet. Also, see wiring diagram located in this publication.

⚠ **WARNING** **Inspect the electrical cord and plug for damage prior to energizing the unit to avoid potential electric shock.**

⚠ **WARNING** **Use electical grounding to avoid electrocution or electric shock. This appliance is equipped with a 3-prong (grounding) polarized plug for your protection against possible shock hazards. Failure to use grounding may result in death, serious injury, or property damage.**

⚠ **WARNING** **Never use an extension cord to connect the unit to the electrical source. Do not use a two-prong adapter or remove the power cord ground prong. Failure to use grounding may result in death, serious injury, or property damage.**

NOTICE **Using any voltage other than specified will result in serious damage to the unit.**

Perlick is committed to continuous improvement. Therefore, we reserve the right to change specifications without prior notice

6

USE & OPERATION

⚠ DANGER **Do not use or store flammable liquids (ie; gasoline) or vapors near the appliance to avoid fire.**

⚠ WARNING **To avoid contamination, use food safe containers (not included) for the storage of craft ice in the cabinet's freezer compartment. This equipment does not include a drain and is intended for use with craft ice and other non-hazardous food stored in food safe containers. Perlick recommends the use of NSF food certified containers.**

⚠ CAUTION **If service is necessary, repair work should be performed by a Perlick-authorized service personnel. Work done by unqualified individuals could create dangerous conditions in unit that may result in serious injury or death.**

NOTICE **The unit must NOT be totally enclosed or damage may occur.**

REPAIR & MAINTENANCE

⚠ WARNING **All service work shall be performed by Perlick-authorized service personnel. All component parts shall be replaced with like components. Incorrect parts or improper service may result in fire.**

INSTALLING CASTERS OR LEGS (OPTIONAL)

Attach bracket assembly to the bottom of the cabinet base using the ¼"-20 Philips head machine screws provided. Attach casters or legs to the mounting bracket with ¼" – 20 Philips head screws provided

NOTICE **To comply with NSF requirements, cabinet must be sealed to floor or on legs, casters, or rollers.**

PLACING THE CABINET

To assure maximum performance, fresh air must be allowed to circulate through the machinery compartment. Do not place anything in front of the cabinet that would obstruct air flow at these grilles. Do not place the unit in an unventilated small room.

NOTICE: Cabinet should be leveled front to back then side to side

Perlick is committed to continuous improvement. Therefore, we reserve the right to change specifications without prior notice

7

Form No. Z2363
Rev. 06.22.2020

SEALING THE CABINET

NOTICE **Finished flooring should be protected with appropriate material to avoid damage from moving the unit.**

NOTICE **If unit has laid on its back or sides, place unit upright and allow minimum of 24 hours before connecting power.**
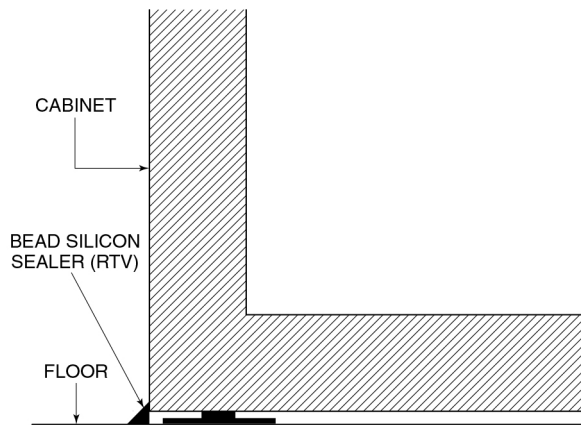

NOTICE **To prevent damage to the counter top and unit underneath, do not place heavy objects on the counter top directly above the unit**

For sanitation purposes, it may be necessary to seal the base of the cabinet to the floor. This can be accomplished by laying a bead of silicone sealant between the base of the cabinet and the floor as shown by the figure below.

When sealing the cabinet to the floor, make sure that the louvered front grille plate can still be removed for condenser maintenance and cleaning

Plug the unit into the 15amp grounded outlet located in the installation opening. With power applied to the unit, check that lighting and cooling function operate properly, then turn off power to wall outlet at the circuit breaker.

Check interior door openings inside the unit to ensure the unit is level

CABINET

BEAD SILICON
SEALER (RTV)

FLOOR

PREPARING THE CABINET

NOTICE	TO achieve maximum performance, interior louver

openings and fan guard openings should never be obstructed.

Refrigerator:

The refrigerator compartments come standard with black vinyl coated adjustable full extension shelves.
Wine Reserve:

The two-door unit comes standard with 4 full extension wine shelves and six full extension black vinyl coated wine shelves. The shelves are removable and adjustable to accommodate oversized (magnum) bottles.
ADJUSTING FULL EXTENSION SHELVING

⚠ CAUTION	Shelves should be emptied and free of any product prior to

moving or adjusting.

Pull the shelf out to its furthest position Locate the tabs in the middle of both extenders (see extender tabs below). Press tabs and pull out.

- Reposition each bracket separately. Grasp the middle of the bracket, pull the front end up and out, then forward to remove (See mounting brackets below).

- Place bracket at desired position. Push the rear hook into the rear key slot. Set front of bracket on the wall hook.

- Repeat for other bracket(s).

- Push extenders completely into the unit. Align the shelf grooves with the extenders and slide completely into the unit.

OPERATION

⚠️ **WARNING** **Before storing perishables, turn unit on and allow it to operate for** a minimum of 24 hours to allow temperatures to stabilize.

NOTICE **When loading items into the unit, do not block internal louvers and** fan guard openings or performance will be decreased. For optimal performance, leave a minimum clearance of 1 inch between the loaded product and any internal air openings.

NOTICE **Always ensure that the manual light switch is in the OFF position** before closing a solid wood or stainless steel door. If manual light switch is left on for an extended period of time, it may increase the cabinet temperature, and cause the refrigeration system to run harder.

Master Switch

These products come equipped with a master power switch located behind the louvered toe kick. Remove the toe kick to turn power on or off to the unit.

Interior Light

Units are equipped with an interior light that illuminate when the door is opened. All HC48 models come standard with adjustable blue and white LED lighting (except for HC24FS & HB24FS models, which have default white LED light). The cabinet also comes equipped with a manual light switch for displaying the products through a glass door.

Loading Product

Before storing perishables, turn unit on and allow it to operate for a minimum of 24 hours to allow temperatures to stabilize. When loading items into the unit, leave a minimum of 1 inch clearance in front of internal louvers and fan guard openings, blocking airflow will result in decreased performance.

CHECKING PRODUCT TEMPERATURE

1. To accurately check the temperature of product stored in the refrigerated compartment, insert an accurate thermometer into a plastic unbreakable bottle, partially filled with water. Tighten bottle cap securely.

2. Place the bottle in the desired area for 24 hours.

   Refrain from opening the unit during the testing period. After 24 hours, check the temperature of the water. Adjust the temperature accordingly using the following procedures:

DIGITAL TEMPERATURE CONTROL

To display the Set point values press the **set** key when the **'SET'** label is displayed. The Set point value appears on the display. To change the Set point value, press the ⊗ and ⊗ keys within 15 seconds. Press **set** to confirm the modification.

The condenser fan motor turns off and on with compressor. The evaporator fan motor runs continuously.

Digital Temperature Controller

On/Off
Press the ON/OFF button to turn the unit on or off.

Perlick is committed to continuous improvement. Therefore, we reserve the right to change specifications without prior notice

10

DIGITAL TEMPERATURE CONTROL (CONT.)

Key Combinations:

(UP) + (DOWN)   Press the UP and DOWN arrow buttons to lock and unlock the keyboard

(SET) + (DOWN)   Press the SET and DOWN arrow buttons simultaneously to enter programming mode.

(SET) + (UP)   Press the SET and UP arrow buttons simultaneously to return to room temperature display.

NOTE: Dependent on the model and configuration, the controllers have been programmed to only allow a temperature adjustment within a specified range. See the chart top right for the specified range allowed for your unit.

Maintenance

⚠ **WARNING** **Shut off the electricity to the unit before cleaning the condenser and other routine maintenance.**

⚠ **CAUTION** **NEVER use hydrochloric acid (muriatic acid) on stainless steel. Do not use abrasive cleansers or cloths on any interior or exterior surfaces or removeable parts.**

⚠ **CAUTION** **Avoid damaging or crushing the con denser fins or tubing.**

STAINLESS STEEL CARE & CLEANING

General
Stainless steel is a "passive" metal because it contains other metals like chromium, nickel and manganese that stabilize the atoms. Chromium provides an invisible passive film that covers the steel surface, acting as a shield against corrosion. As long as the film is intact and not contaminated, the metal is passive and stainless. If the passive film of stainless steel has been broken, equipment can start to corrode and rust.

Three materials or processes can br eak down stainless steel's passive layer and allow corrosion to occur:

 • Mechanical abrasion

 • Deposits and water

 • Chlorides

Mechanical abrasion refers to items that will scratch a steel surface. Steel pads, wire brushes and scrapers are prime examples.

Water comes out of the faucet in varying degrees of hardness. Hard water may leave spots. When allowed to sit, these deposits will break down the passive chromium layer and rust stainless steel. Other deposits from food preparation must be promptly removed with an appropriate cleaning agent.

Chlorides are found nearly everywhere. They are in water, food and table salt. Household and industrial cleaners are the worst offenders.

Preventing Stainless Steel Rust
Use non-abrasive tools to clean stainless steel products. Soft cloths and plastic scouring pads will not harm the steel's passive layer.

Clean with polish lines. Some stainless steels have visible polishing lines or "grain". When visible lines are present, always scrub in a motion parallel to the lines. When the grain cannot be seen, polish in a consistent straight pattern and not in a circular motion.

Use alkaline, alkaline chlorinated or non-chloride containing cleaners. While many traditional cleaners are loaded with chlorides, the industry is providing an ever-increasing choice of non-chloride cleaners. If you are not sure of chloride content in the cleaner being used, contact your cleaner supplier. If your present cleaner contains chlorides, ask your supplier for an alternative. Avoid cleaners containing quaternary salt; it also can attack stainless steel and cause pitting and rusting. Keep food equipment clean. Use alkaline, alkaline chlorinated or non-chloride cleaners at recommended strength. Clean frequently to avoid build-up of hard, stubborn stains. The single most likely cause of damage is chlorides in the water. Remember, adding heat to cleaners that contain chlorides dramatically increases their effect on stainless steel.

If chlorinated cleaners are used, immediately rinse and wipe equipment and supplies dry. The sooner you wipe standing water, especially when it contains cleaning agents, the better. After wiping equipment down, allow it to air dry. Oxygen helps maintain the stainless steel passive film.

Glass panels may be cleaned using any standard glass cleaner available on the market.

To clean interior and exterior non-metallic surfaces and removable parts, wash with mild solution of soap and lukewarm water with a little baking soda. Rinse and dry thoroughly. Avoid getting water on the lights, controllers, fan motors and unfinished wood wine rack faces.

Perlick is committed to continuous improvement. Therefore, we reserve the right to change specifications without prior notice

12

Cleaning the Condenser

⚠ **DANGER** **Flammable Refrigerant. Risk of fire or explosion. Do not damage refrigeration tubes.**

The condenser (located behind the front grille cover)

should be cleaned every three (3) months. Use a soft bristle brush and vacuum to remove dust and lint.

Recommended Cleaners for Specific Situations

Job	Cleaning Agent	Comments
Routine cleaning	Soap, ammonia, detergent	Apply with sponge or soft cloth
Fingerprints and smears	Areal 20, Lac-O-Nu, Lumin Wash, O-Cedar Cream Polish	Provides barrier film to minimize fingerprints. Can be used on all finishes. Rub the surface with a cloth as directed on the package.
Stubborn stains and discolorations	AllChem Concentrated Cleaner, Samae, Twinkle, Cameo Copper Cleaners, Grade FFF Italian Pumice Whiting, Steel Bright, Lumin Cleaner, Zud Restoro, Sta-Clean, Highlite Cooper's Stainless Steel Cleaner or Revere Stainless Steel Cleaner	Apply with a damp sponge or cloth, then rinse with clear water and wipe dry.
	Old Dutch, Lighthouse Sunbrite, Wyandotte Bab-O, Gold Dust, Sapollo, Bon Ami or Comet	For these household cleaners, rub with a damp cloth. They may contain chlorine bleaches so rinse thoroughly after use and wipe dry.
	Liquid NuSteel or Dubois Temp	For these products, rub the surface with a dry cloth using only a small amount of cleanser. Rinse with water and dry.
Heat tint or heavy discoloration	Penny-Brite, Copper Brite, Paste Nu-Steel, Dubois Temp or Tarnite	Rub onto surface with a dry cloth
	Bar Keepers Friend, Revere Stainless Steel Cleaner, Allen Polish, Steel Bright Wyandotte Bab-O or Zud	When using these cleaners, apply with a damp sponge or cloth, rinse thoroughly and wipe dry.
Tenacious deposits, rust, discoloration, industrial atmospheric stains	Oakite No. 33 Dilac, Texo NY, Flash-Klenz Caddy Cleaner, Turco Scale 4368 or Permag 57	Swab and soak with a clean cloth. Let stand for 15 minutes or more according to directions on package, then rinse and wipe dry.
Rust dicoloration or corrosion caused by cleaning agents containing hydrochloric (muriatic) acid or chlorine bleach	3M Scotch Pad, type A, grade "fine"	Clean off the surface soil using cleaning methods above. Then rub discolored or corroded areas lightly with a dry pad.

Use of property names is intended only to indicate a type of cleaner and does not constitute an endorsement. Omission of any proprietary cleaner does not imply its inadequacy. All products should be used in strict accordance with instructions on the package.
NOTE: Do <u>NOT</u> use steel wool or scouring pads to clean stainless steel.

Perlick is committed to continuous improvement. Therefore, we reserve the right to change specifications without prior notice

Troubleshooting

⚠ **DANGER** *Electrocution hazard!* **Never attempt to repair or perform maintenance on the unit until the main electrical power has been disconnected.**

If the unit appears to be malfunctioning, read through the OPERATION section first, then check the guide below to identify and resolve the problem.

PROBLEM	RESOLUTION
Light stays on when the door is closed	Manual ON/OFF light switch is turned on.
	Is the door switch making contact with the plunger?
Noisy during operation	Certain sounds are normal. Soft sounds from the compressor, fan motor and valves will be heard.
The refrigerated cabinet isn't running	Is there electrical power to the unit?
	Is the building circuit breaker or fuse on?
	Is the control set properly?
	Is the condenser area clean?
The refrigeration compartment is warmer than usual	Is the control set properly?
	Is the light staying on?
	Is the condenser area clean and free of obstruction?
	Has the door been open for a long time or more frequently door opening occurred?
	Are internal louvers and fan guard openings obstructed?
The refrigerated compartment is cooler than usual	Is the control set properly?
	Is the door closing and sealing properly?
The refrigerations runs for long periods of time	Is the condenser area clean and free of obstruction?
	Has the door been open for a long time or more frequently door opening occurred?
	Has warm product just been placed in the unit?
	On hot days and in warm room temperatures, the system will run longer.
Condensation forms inside the refrigerated compartments	This is normal during high humidity and frequent door openings.
	Are the doors closing and sealing properly?
Condensation forms on the outside of the unit	During periods of high humidity, some condensation might appear on the outside surface. The condensation will disappear when the humidity drops. Meanwhile, be sure doors are closing and sealing properly. If condensation persists, contact your Perlick Factory Authorized service center.
