FEATURES GUIDE

STEEL TUBE BURNER

Tubular steel burners offer excellent performance at an economical price. Available in Toastmaster charbroilers, models have one (1) burner per 12"

CAST IRON BURNER

Ten times heavier and thicker than sheet metal burners, cast iron burners offer performance and durability in the most corrosive kitchen environments. One (1) burner per 12" for Star-Max models, and two (2) burners per 12" for Ultra-Max models

CAST IRON GRATES

All Star and Toastmaster charbroilers come with heavy-duty cast iron grates. Incline or lay flat to optimize your cooking surface

RADIANT STYLE

Radiants protect the burners from debris at the same time they ensure a more uniform, predictable working temperature profile. Star-Max and Toastmaster heavy gage sheet metal radiants can last for years, and the uniquely durable Ultra-Max steel alloy radiant may last the life of your charbroiler!

LAVA ROCK

Lava rocks function as a radiant for the entire burner array and diffuse the heat generated by the burners effectively. Cooking surface temperature profiles can be modified by positioning the rock, and flavor profiles may vary depending on use.
